

QUANTUM

TIMBER FINISHES

Environmentally Sustainable, Environmentally Responsible.

SAP STRIP

A timber cleaner for removing tannins and extractives for new and all unpainted timber.

Advantages

- Remove tannins and extractives.
- Remove mill glaze to allow penetration of the coating.
- Don't have to wait for the timber to weather before applying coatings.

Typical Applications

All timbers under 12 months old where full weathering hasn't yet occurred.

Coverage

- 300g container will clean approximately 25-30m² of decking and 50m² of vertical surfaces.

Application Method

By hose, brush or roller.

Good preparation is key to a professional looking, long lasting finish:

- **Decking**
 1. Dissolve 300g in 5 litres of hot water.
 2. Apply with a brush or garden spray.
 3. Agitate with a stiff broom or brush to bring to the surface tannins and extractives.
 4. Leave on for 15-30 minutes.
 5. Wash off with a strong jet of water (preferably a power wash) to rid the surface of any residual cleaner and tannins brought to the surface.
- **Vertical surfaces**
 1. Dissolve 300g in 10 litres of hot water.
 2. Apply as above.

Note: Mill glaze is a term used when the planers or blades in the dressing process close the top cells of the timber, this gives the timber a polished appearance. If this surface isn't broken the coating will not be able to penetrate the timber causing early adhesion failure.

SAP STRIP

A timber cleaner for removing tannins and extractives for new and all unpainted timber.

Properties	Finish	Not Required.
	VOC Level	Not Required.
	Thinner	Not required.
	Pack Sizes	300g or 900g.
	Product Code	4915.
	Clean Up	Water clean-up.

Health & Safety

Before handling, refer to the Safety Data Sheet (SDS) for health and safety information. Ensure that all people using this product have read and understood this data sheet, the associated SDS and packaging label before using this product.
